

Statement on Oil and Oil Additives

1. *LIQUI-FLON®* is contained as a preservative and coacting active- agent in the products.
2. *LIQUI-FLON®* does not alter oils because it completely sticks on the piston and cylinder surface etc. After treatment, no solid matter particles remain in the oil.
3. Therefore the oil industry does not have any more objections to *LIQUI-FLON®*
4. All oil additives, which allegedly influence somehow the surface, have no proven effect and are therefore useless. Only *LIQUI-FLON®* can build up a coating, but it is no oil additive, although added to the oil.
5. Since it does not influence any oil, *LIQUI-FLON®* does not need any release by the car manufacturers.
6. Engine wear is caused by oil and poor oil additives. They cause damages of billions of dollars world-wide. It is proven that *LIQUI-FLON®* concentrate can avoid 54% of those damages.
7. The patent owner, HUTH together with an important company, grants WARRANTY of saving up to
25%
of the additional fuel consumption (= difference between Manufacturer's data and effective consumption).
